Mon, 18 Mar 2019 11:59:00 GMT Savitribai Phule Pune University, Pune - In electronics, a comparator is a device that compares two voltages or currents and outputs a digital signal indicating which is larger. It has two analog input terminals + and âˆ” and one binary digital output .The output is ideally = {, + > âˆ”, + < âˆ” A comparator consists of a specialized high-gain differential amplifier.They are commonly used in devices that measure and digitize analog ... Thu, 21 Mar 2019 11:34:00 GMT Comparator - Wikipedia - In computer engineering, a hardware description language (HDL) is a specialized computer language used to describe the structure and behavior of electronic circuits, and most commonly, digital logic circuits.. A hardware description language enables a precise, formal description of an electronic circuit that allows for the automated analysis and simulation of an electronic circuit.
