Tue, 13 Dec 2011 23:57:00 GMT Effect of coarse initial grain size on microstructure and ... - Short information for the beginners: Self-propagating high-temperature synthesis (SHS) means the synthesis of compounds (or materials) in a wave of chemical reaction (combustion) that propagates over starting reactive mixture owing to layer-by-layer heat transfer.(See photo) Mon, 18 Feb 2019 16:42:00 GMT About Self-Propagating High-Temperature Synthesis - The δ - α' phase which exists in various series of stainless steels is a significant subject in steels science and engineering. The precipitation of the δ - α' phase is also a widely discussed aspect of the science and technology of stainless steels. The microstructural variation, precipitation mechanism, prediction method, and effects of properties of δ - α' phase are also of importance in academic ... group 15 of the periodic table, one of the elements called pnictogens, and has an electronegativity of 2.05. In accordance with periodic trends, it is more electronegative than tin or bismuth, and less electronegative than tellurium or arsenic. Antimony is stable in air at room temperature, but reacts with oxygen if heated to produce antimony trioxide, Sb_2O_3 . Sun, 17 Feb 2019 23:39:00 GMT Antimony - Wikipedia - ABSTRACT. Thermal power plants and refineries around the world share many of the same problems, namely aging equipment, high costs of replacement, and the need to produce more efficiently while being increasingly concerned with issues of safety and reliability. U nju su ukljuÄena sva djelovanja usmjerena na sprjeÄavanje odnosno usporavanje propadanja predmeta, kao i na poboljšanje dostupnosti ... Tue, 14 Aug 2012 23:53:00 GMT

Konzervacija metala - Wikipedia - Tin is a chemical element with the symbol Sn (from Latin: stannum) and atomic number 50. It is a post-transition metal in group 14 of the periodic table of elements. It is obtained chiefly from the mineral cassiterite, which contains stannic oxide, SnO_2 . Tin shows a chemical similarity to both of its neighbors in group 14, germanium and lead, and has two main oxidation states, +2 and the ... Tue, 19 Feb 2019 19:12:00 GMT Tin - Wikipedia - The typical microstructure of this alloy system (Cu - Zn) consists of $\hat{I}^{\pm} + \hat{I}^2$ phases; \hat{I}^{\pm} -phase is the Cu solid solution with Zn (possessing a face-centered-cubic (fcc) lattice), while \hat{I}^2 -phase is the ordered non-stoichiometric intermetallic compound $CuZn$ (possessing a body-centered-cubic (bcc) lattice).
